

RTI 2-way driver development

Training and workshop
for the RTI 2-way driver developer kit

July 12th and 13th, 2011
in Uhingen, Germany

Training and workshop: RTI 2-way driver developer kit

Topics

- General Approach
- Necessary Planning
- Driver build-up and programming
- Debugging
- Middleware Design
- Documentation and help files
- Maintenance, support and updates of your driver
- Sharing your driver with the RTI community

The event is hosted by VIVATEQ and run by an approved RTI 2-way driver developer. We take care of your lunch and dinner and will help you to book a room in a hotel close to the training center.

This two day training and workshop imparts the specific knowledge for the use of the RTI software developer kit (SDK). It is dedicated to the experienced programmers and developers with profound JavaScript skills. The RTI specific terminology as well as the orderly build-up of a driver will be explained in an example. We will talk about how to debug your driver as well as maintenance, proper documentation of important information and how can you share your driver with other people. This is a hands-on training with a clear focus on programming with live support.

The training will be held mainly in English language.

However we will have a translation support into German and French on site.

Training and workshop: RTI 2-way driver developer kit
