

The XP-8 is a high-end remote control processor for automating the operation of electronic systems in homes and office buildings. The combination of a blazing fast MPU, real-time/multitasking operating system, and tremendous expandability make the XP-8 the perfect solution for large-scale and complex projects.

Like other RTI processors, the XP-8 has been designed to interface seamlessly with all RTI remote controls and touchpanels. However, in addition to an abundance of basic control ports such as infrared, contact closures, and power sensors - the XP-8 provides advanced control interface options such as RS-232, USB and Ethernet.

An internet connection to the XP-8 allows convenient services such as off-site monitoring, control, and updating.

## Key features:

- Real time clock
- Input triggered events
- Scheduled events
- Multitasking operations
